

Resistance to adopting security-related maintenance measures as a vulnerability in a disaster

One discussion group identified individuals whose inertia to take care of security-related maintenance measures was seen to make them a potential vulnerable group: “There can also be the lazy people who don't check their [electricity] substations, I know cases of people who lie that they aren't home when someone comes to check their substation” (G3; 25-44 yrs.), or those who were seen as potentially vulnerable through creating their own vulnerability, for example, through illegal adjustments to their homes.

Applicable to:

Stakeholders: [Worldviews](#)

Disaster Phases: [Prevention](#)

Types of Actors Concerned: [Local authorities](#)

Hazards: [Man-made non-intentional hazards or emergency situations](#), [Man-made intentional hazards](#)

Recommendations:

- [Consider vulnerable groups when designing and implementing disaster response measures](#)
