

The organisational network of the Territorial Coordination Master Plan of the Province of Potenza

The organizational network carried out with key actors of the community of supporters show a highly interlinked core network involving actors from different organizational scales (local, provincial, and national). The individually drafted maps show a high level of coherence, revealing that the actors have a similar view of the network, which is very important in a crises or disaster situation. Additional key factors for resilience turned out to be the existence of a local civil protection plan and regular emergency exercises, the fact that the core network needs a little time to become active and fully operative, as well as the personal knowledge and trust in the other members of the network.

Applicable to:

Stakeholders: [Social networks](#), [Local knowledge](#)

Disaster Phases: [Preparedness](#)

Types of Actors Concerned: [Active citizens](#), [National civil protection body](#), [Local authorities](#)

Hazards: [Natural hazards](#)

Recommendations:

- [Improve disaster management processes through better networking and cooperation between public and private actors and a better understanding of the role which each of these actors plays in the different disaster management stages](#)
